

## CURVED CONVEYORS

Curved conveyors feature a wide choice of side flexing modular conveyor belt and product support flights.

- Variable speed single phase or 3 phase motors mounted internally within belt track.
- High strength low friction HM Polyethylene PE500 side frames are chemically inert with no corrosion.
- Machined side frames keep the belt under control and prevent side to side movement, a potential problem with conventional belt conveyors.
- Low running costs and minimal maintenance.
- The modular belt can be completely removed from a conveyor in less than 3 minutes for easy cleaning, adding or removing product support flights.

**Curved Conveyor** side frames are mounted in an anodised aluminium section to give a solid and robust structure for years of use. Option of castors or foot mounted.

**Curved Conveyors** can be supplied with a variety of ancillaries such as metal detectors, weigh scales, cooling fans and also with a variety of control systems from simple stop/start to fully integrated units.

**Curved Conveyors** are available with complementary product handling equipment – **Rotary Box Fillers**, **Roller Separators** and **Paddle Separators** in matching colours designed for exact process requirements.
